

ClassicModels

Question Set 1:

1. List all employees (first name, last name, job title) who are 'Sales Rep's'.
 2. Find all products that belong to the 'Classic Cars' product line.
 3. Get a list of all customers from 'USA'.
 4. Show all orders that were shipped after the required date.
 5. Find the names of all products that have a quantity in stock less than 1000.
-

Question Set 2:

1. For each customer, list their customer name and the name of their sales representative employee.
 2. Calculate the total number of orders placed by each customer. Show the customer name and the order count.
 3. Find the total payment amount received from each customer. Show the customer name and the total amount.
 4. List all products (product name, product line) that have never been ordered. (Hint: Use a LEFT JOIN and check for NULL).
 5. Show the product name and the total quantity ordered for each product, but only for products where the total quantity ordered is greater than 1000.
-

Question Set 3:

1. Find the top 5 most expensive products (based on buyPrice).
 2. List all orders that are currently 'On Hold'.
 3. Find all payments made in the year 2004.
 4. Show the three office cities that have the most employees.
 5. Get the list of employees who report to someone else (i.e., they have a reportsTo value). Show their name and their manager's name.
-

Question Set 4:

1. For each order, list the order number, customer name, and the name of the sales rep responsible for that customer.
2. Find the customer who has made the single largest payment.

3. Show the product line and the average buy price for products within that product line, but only show product lines whose average buy price is above \$50.
 4. List all products that were ordered in 2005. Show the product code, product name, and the total quantity ordered in that year.
 5. Find customers who have not placed any orders.
-

Question Set 5:

1. Calculate the total value of inventory for each product line. (Value = quantityInStock * buyPrice).
2. Identify orders where the total value of the order (sum of quantityOrdered * priceEach for all items in the order) is greater than \$50,000.
3. Find the month and year with the highest total sales amount (from payments). Format the result like "2004-08".
4. List the employees who work in the same office as their manager. (This requires a self-join on the employees table and a join to the offices table twice).
5. For each customer, find the difference between their credit limit and the total amount they have spent (from payments). Show only customers where this difference is less than \$10,000.
